Claim 1 (previously presented): An isolated protein complex having a first protein interacting with a second protein, said first protein being selected from the group consisting of:

(a) Tsg101,
(b) a Tsg101 fragment that comprises a UEV domain and interacts with an HIV GAGp6 late domain,

(c) a first polypeptide that interacts with an HIV GAGp6 late domain and has an amino acid sequence that is at least about 75% identical to (a) or (b), and

(d) a first fusion protein comprising (a), (b), or (c);

and said second protein being selected from the group consisting of:

(i) HIV GAG,
(ii) a fragment of HIV GAG that comprises an HIV GAGp6 late domain and interacts with Tsg101,

(iii) a second polypeptide that interacts with Tsg101 and has an amino acid sequence that is at least about 75% identical to that of (i) or (ii), and

(iv) a second fusion protein comprising (i), (ii), or (iii).

Claim 2 (previously presented): The isolated protein complex of Claim 1, wherein said second protein is HIV GAGp6 or a fragment thereof that comprises an HIV GAGp6 late domain and interacts with Tsg101.
